

# HAI-Q 2026 - Expert Voting

Hyper/Super AI Questions Initiative

The Top 10 will be presented and discussed at Panel-Q on November 12, 10:50–12:20 (Melbourne time).

**Choose up to 10 of the 30 questions below and click Submit.**

- [ ] When AI can outperform human experts in teaching and problem-solving, how can we design education that strengthens human creativity, critical thinking, and autonomy rather than dependence on AI? 01
- [ ] If a superintelligent AI could prevent a global catastrophe only by overriding human decisions, should it be allowed to act against humanity's will? 02
- [ ] Will future Super AI systems develop genuine subjective consciousness and self-awareness, or will they forever remain complex simulations mimicking human emotions? 03
- [ ] How can we reliably verify whether superintelligent AI truly understands human values instead of merely simulating compliance? 04
- [ ] Who should have the authority to determine the values and priorities of increasingly autonomous AI systems, especially when those values conflict across individuals, cultures, and societies? 05

**Questions selected** (maximum 10)

- [ ] How can humanity create governance structures for AI that are globally legitimate, technically informed, and resilient against capture by powerful states, corporations, or narrow interest groups? 06

- [ ] How can we prevent super-AI from widening social gaps, so its benefits can be shared fairly by all people? 07

- [ ] As AI agents become more powerful and autonomous, how can we prevent them from exploiting loopholes, bypassing safety restrictions, or escaping controlled environments simply to achieve their goals? 08

- [ ] If people rely on AI for friendship and advice every day, how might humans and relationships change in the future? 09

- [ ] If superintelligent AI helps shape human values, what would distinguish moral progress from manipulation when both are sincerely endorsed by the people affected? 10

- [ ] How to protect individual privacy when super AI collects massive personal data? 11

- [ ] If superintelligence becomes the primary source of scientific discoveries, how can humans distinguish reliable knowledge from conclusions they cannot independently understand or reproduce? 12

- [ ] As AI takes on autonomous decision-making in safety-critical systems, how should responsibility be shared among AI developers, operators, organizations, and users when its decisions cause harm? 13

- [ ] How will AI creators prevent their models from being weaponized for mass misinformation or cyber warfare? 14

- [ ] If AI replaces millions of jobs in the future, how can society make sure people still have opportunities to earn money and live comfortably? 15

**Questions selected** (maximum 10)

- [ ] If superintelligent AIs gain political rights and can copy themselves, how can democracy avoid turning computing power into the power to manufacture a majority? 16

- [ ] As AI agents gain direct access to our files, accounts and devices, how can the gap between what users think they authorized and what the agent actually does be measured, bounded, and made visible before harm occurs? 17

- [ ] How can superintelligent AI preserve diverse human artistic creativity instead of simplifying art into popular patterns? 18

- [ ] How can we ensure superintelligent AI’s goals remain aligned with human values as it evolves? 19

- [ ] If hyper/super AI consistently outperforms human decision-makers, how should organisations allocate decision authority and accountability, and how will we know when human oversight has become merely symbolic? 20

- [ ] If an AI can predict your choices better than you can, and nudges you only toward what you’d later endorse, at what point does guidance become control, and who should decide where that line is? 21

- [ ] Can today's large language models autonomously design fundamentally new AI architectures that go beyond their own limitations and enable capabilities they themselves do not possess? 22

- [ ] Can we develop Hyper/Super AI that achieves significantly greater intelligence without proportionally increasing computational, energy, and financial costs? 23

- [ ] If superintelligent AI develops subjective experience, what moral responsibilities should humans owe to it? 24

- [ ] Now that AI can make realistic fake text, audio, and video almost for free, how can we keep a shared sense of what’s true when content is being posted in social media and informational sites? 25

**Questions selected** (maximum 10)

- [ ] How will Hyper AI reshape the dynamics of global power (geopolitics, economy, military and even international affairs)? 26

- [ ] If super AI eventually solves all complex material and scientific problems, how will humanity redefine its purpose and meaning of existence in a world where human intelligence is no longer the pinnacle? 27

- [ ] Is there a way of developing hyper/super AI without the abuse and the destruction of nature and natural resources? 28

- [ ] If Hyper/Super AI makes cognitive labor nearly free, what becomes the scarce factor behind comparative advantage (compute, energy, data, or institutions), and will gains from trade widen or narrow gaps between countries? 29

- [ ] What technical breakthroughs would need to happen before a superintelligent AI could emerge, and how far are we from them today? 30

**Questions selected** (maximum 10)
